Child Care and Development Block Grant Participation in 2007

By Hannah Matthews

November 2008

In October 2008, the Child Care Bureau released *preliminary* federal fiscal year 2007 administrative data for the Child Care and Development Block Grant (CCDBG).¹ This fact sheet provides a snapshot of the CCDBG program participation in 2007, noting the great variability in child care assistance programs among states. More information, including individual state data, is available on the Child Care Bureau Web site. Comparable information on state child care spending in 2007 are not yet available from the Child Care Bureau. Participation is one of several significant variations among state child care programs. This is due in part to states' different policy choices in the provision of assistance. Policymakers and advocates are encouraged to obtain the most recent information about their state—including data on participation, expenditures, income eligibility criteria, and provider reimbursement rates—to evaluate the full range of child care assistance policies.

A snapshot of CCDBG participation in 2007:

The number of children receiving CCDBG assistance declined in 2007.

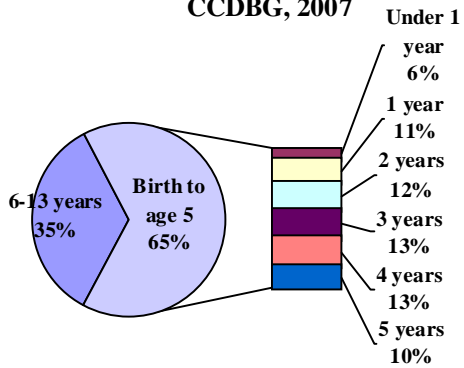

CCDBG served a monthly average of 1.7 million children in 2007, a decline of 64,900 children from 2006.² This was the smallest number of children served by CCDBG this decade (see Figure 1). State data on children served vary. While 22 states increased the number of children served, 27 states served fewer children in 2007 than in 2006.³

Source: Child Care Bureau

Note: The data in this fact sheet are based on children who received CCDBG-funded child care assistance in 2007. Participation data on children who received assistance through other sources of funding, including the Temporary Assistance for Needy Families (TANF) block grant, are not available.

Figure 2. Ages of Children Served in CCDBG, 2007

For example, Ohio served 14,700 *more* children in 2007, while California served 28,400 *fewer* children.

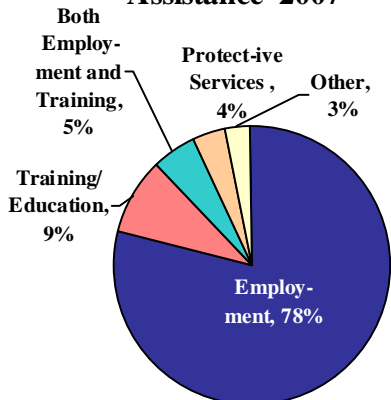

All families that qualify for child care assistance cannot access subsidies. According to research from the National Women’s Law Center, as of early 2008, 17 states had waiting lists, or had frozen intake for child care assistance. Waiting lists were as high as 204,063 children in California and 47,603 children in Florida.⁴

CCDBG serves children from birth to age 13. Fewer than a third of children served in 2007 were under age 3,⁵ while the 3-5 and 6-13 age groups each comprised more than one-third of children served (see Figure 2). This breakdown has been fairly consistent over time.

CCDBG serves children from different backgrounds. African-American and White children each comprised 44 percent of children served in CCDBG in 2007. Native American or Alaskan Native, Asian, and Native Hawaiian or Pacific children each comprised 1 percent of children served. Two percent of children served were multi-racial; a race was not reported for 8 percent of children. Nineteen percent of children served were Latino (regardless of race). Information on the languages spoken or country of origin of children or families served in CCDBG is not available.⁶

More than half of children are in center-based care. CCDBG allows families to select the child care provider of their choice. In 2007, 58 percent of children were served in center-based care, 28 percent in family child care homes, 6 percent in their own homes, and 5 percent in group homes. Seventy-five percent were served in licensed or regulated care. Among children served in legally operating, non-regulated settings, 62 percent were in relative care.

Figure 3. Percentages of Families by Reason for Receiving CCDBG Assistance 2007

Vouchers are the most common type of payment for care. In 2007, 83 percent of children received CCDBG assistance through vouchers or certificates. Twelve percent of children were served through grants or contracts, and 3 percent were served through cash payments. Contracts, which are formal agreements between a state and a provider to serve a set number of children, can be a way to guarantee that families can successfully find the care they need—particularly in communities without an adequate supply of child care.⁷ While most states do not use contracts, Arkansas,

California, Connecticut, Florida, Hawaii, and Massachusetts serve 30 percent or more of children through contracts.

Most families receiving CCDBG are working, low-income, and providing co-payments. The vast majority of families receive CCDBG assistance because they are working; 92 percent are working and/or in education or training programs (see Figure 3).

Though most families work, they are very low-income. In 2005, the latest year data are available, the median monthly income of families receiving CCDBG-funded assistance was \$1,283 or \$15,396 when annualized and nearly half (49 percent) of families had incomes below the federal poverty level.⁸ In 2007, 17 percent of CCDBG families received TANF assistance. Sixty-four percent of CCDBG families paid co-payments for care. The mean co-payment amount was 6 percent of family income.
